Habasit – Solutions in motion

## TPU Scraper

### The efficient belt cleaning tool

#### **For excellent hygiene and food safety**

Belt scrapers are an essential component on the production line in many sectors of the food processing industry. They are used to remove sticky parts of the transported goods from the belt. This prevents spillage and material accumulation on the return roller that could potentially lead to bacterial growth and food contamination.

While belt scrapers must be efficient, they must also avoid scratching or damaging the belt surface, which could decrease belt lifetime.

If belt cleaning is not properly performed, material leaks at transfer points can lead to the accumulation of extra material on the roller drums, causing tracking problems and damage to belt edges.

# TPU Scraper

## The efficient belt cleaning tool

### Key advantages of using the Habasit TPU belt scraper

- Superior cleaning effectiveness even when used with liquids (oil, water, detergent, etc.), ensuring increased hygiene and food safety
- Extended belt lifetimes, leading to lower maintenance costs and reduced downtime
- X-ray and metal detectable version for additional food safety procedures
- Food approval from both the EU and FDA
- Suitable for all types of fabric and monolithic belts

### TPU belt scrapers vs. classic scrapers

Classic scrapers are usually made of metal or hard plastic. A TPU scraper offers the advantage of a flexible tip:

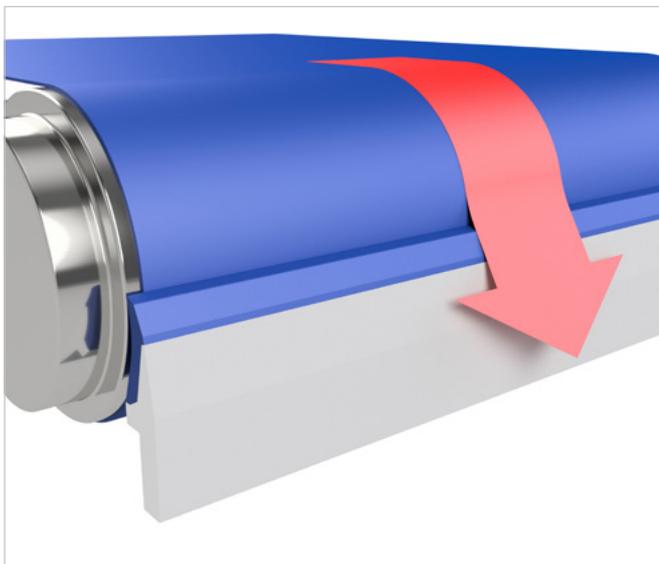

#### No risk of damaging the belt surface

- When spillage builds up on the running side of the belt, the roller increases in diameter. This pushes the belt against the primary scraper, which if made of metal or hard plastic, can damage the belt surface. A TPU tip is flexible and adapts easily to belt irregularities.

#### More efficient cleaning

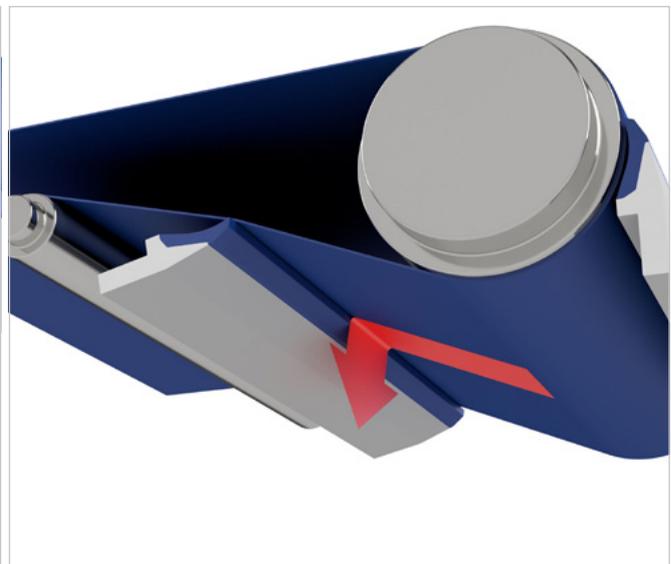

- Even when a classic scraper is mounted on a flexible rig, allowing belt irregularities to push the scraping bar away from the roller, the hard tip cannot accommodate this asymmetry, which results in uneven cleaning. A TPU scraping tip matches the belt surface in all cases, resulting in more efficient cleaning.

### Possible positions for the belt scraper

Primary scraper

When the material transported is made of coarse, sticky, or wet particles, the primary scraper is placed against the drive pulley immediately after the discharge flow. The vertical position depends on the belt speed and the size of the goods.

Secondary scraper

A secondary scraper can be installed along with the primary scraper if more thorough cleaning is required. It can also be installed alone if the transported material is dry and fine. Usually mounted after the drive pulley, in this configuration the scraper pushes directly against the belt to increase cleaning efficiency.

**Color of body:** White

**Color of tip:** Cobalt Blue

The Habasit TPU belt scraper complies with the following regulations: (EC) No 1935/2004, (EC) No 2023/2006, (EU) No 10/2011, (EC) No 1333/2008 (food additives), (EC) No 1334/2008 (flavourings) and FDA.

### TPU belt scraper dimensions

Belt scrapers come in a standard 2.4 m length, which can be cut as required.

### Technical consultancy

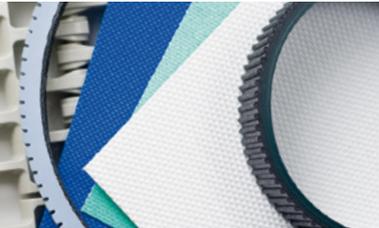

For specific or non-standard applications, please contact your Habasit specialist for advice and assistance with selecting the most suitable belt scraper solution.

# Solutions in motion

## **Comprehensive consulting and technical support**

Profit from the best consulting and technical support in the lightweight belting industry. Local experts are always available to assist you with your belting needs. The Habasit team is proud to provide the highest level of support, together with top-quality products that have led the global market for decades.

## **Belt selection and calculation assistance**

We are always glad to help you select the most suitable belt for any application for your convenience. We now also provide the free online tool 'SeleCalc' that allows you to easily make selections and calculations yourself. Simply register online at [selecalc.habasit.com](http://selecalc.habasit.com).

## **Fabrication, assembly and local installation services**

As a full-service belting provider, we offer joining and assembly services either at our own locations or directly on your equipment.

Habasit has over 30 affiliates worldwide, each with its own inventory, fabrication, assembly and service facilities.

Together with representative offices and numerous qualified distributors, we can react quickly and efficiently to meet all your needs.

## **Customer training programs**

To ensure the optimal performance and maximum lifespan of all our products, we offer training programs and various support tools. This includes proper procedures for fabrication, installation, assembly, maintenance and belt repair, all of which take place at a Habasit site or at your location.

## **Belt monitoring, inspections, analyses and process optimization proposals**

We organize and handle belt maintenance, inspections, analyses and surveys at customers' sites. Upon request, we are ready to develop optimization proposals to ensure you're getting maximum value from your machinery and process output.

## **Design assistance for customized solutions**

Habasit believes in building partnerships with our customers. Our engineering team will work closely with your engineers on joint design developments from initial design to final implementation. This expert service can be invaluable for projects involving new technologies or large-scale modifications and adaptations.
